PROFILE

Over 9 years of building enterprise web apps for US & EU companies, mostly in Angular. I work B2B and fully remote, directly with product teams, without agencies in between. I enjoy long-lived products where I can own the front end, shape the architecture and help the team ship.

I came to software from industrial engineering and international sales, which is where the other half of the job comes from: clear communication, ownership, and turning business needs into plans.

EXPERIENCE

Senior Angular Developer · US cybersecurity company · contract — 2023 – present · 3 yrs

A self-service certificate management platform: modern Angular (standalone components, signals), AG Grid server-side for millions of records, Keycloak, an Nx monorepo, and a Claude Code review command that encodes the project standards.

Angular Developer · Global IT services company — 2019 – 2023 · 4 yrs

Enterprise apps for top US companies in insurance, energy, audit and fintech: shared component architecture, NgRx, SAFe at scale, mentoring new team members.

Web Developer & Consultant · Freelance — 2020 – 2022 · 2 yrs

Greenfield projects with Next.js, React and Angular, delivery management for a fitness platform, and third-party technical audits that helped secure a €2M investment.

Front-End Developer · E-commerce agency — 2017 – 2019 · 2 yrs

Online stores on Salesforce Commerce Cloud: storefronts, product pages, carts and accounts.

Project Manager · Fitness startup — 2017 · ~1 yr

Requirements, timelines and team coordination: where the move into software started.

Engineering & sales · Industry — Before 2017 · 7 yrs

Industrial engineering and international sales at a global steel pipe manufacturer, then site engineer in Dublin.

WHAT I CAN HELP WITH

Enterprise Angular development: Large, long-lived apps: architecture, shared components, state management, performance and upgrades to the latest Angular.

Technical consulting: Front-end architecture, technology choices, code reviews and mentoring, with the business goals in view.

Project management & delivery: Agile and SAFe delivery, breaking down requirements, priorities and planning, coordinating the team.

Custom software development: Greenfield web apps and sites with Next.js and React, from the first idea to production.

AI-assisted delivery: Documentation and context that make AI coding agents reliable, with a senior review of every change.

TECHNOLOGIES

Front end: Angular, TypeScript, JavaScript, RxJS, NgRx, Signals, Angular Material, PrimeNG, Kendo UI, AG Grid, Google Charts, Sass, i18n, Next.js, React, Gatsby

Delivery & tooling: Nx, Unit testing, Git, Docker, NGINX, Jenkins, Azure, Netlify, Jira, Keycloak, Agile, SAFe

AI: Claude Code, GitHub Copilot, DeepL (AI-assisted translation), AI-assisted development

EDUCATION & LANGUAGES

Master's degree, Software Development and Business Information Systems · Alexandru Ioan Cuza University of Iași · taught in English · 2019 – 2023

Bachelor of Engineering, Geodesy and Geographic Information Systems · Gheorghe Asachi Technical University of Iași · 2006 – 2010

Languages: English (full professional), Spanish (limited working), French (elementary), Romanian (native)
